## Toronto Airport Development Firm Goes With FileDirector

Airport Development Corporation (ADC) is responsible for 3 of the world's major airports; Pearson International Airport in Toronto, Canada. Ferihegy International Airport in Budapest, Hungary and Quito International Airport in Ecuador. They are also responsible for many other major developments such as residential towers, hospitals, offices and hotels in Canada.

In August 2008 ADC identified the requirement for a Document Management Solution to meet their unique and ever growing needs. Administration Manager, Andrea Danckzay-Blum, selected FileDirector from above several other systems she saw and said "We were extremely comfortable in choosing FileDirector for our data project, something that could have easily become complicated and overwhelming. Our solution partner offered an incredible amount of support and simplified the project in a way as to make us feel that our goals were not only attainable but the process in getting there was much easier than anticipated."

FileDirector has been used to replace an ever-increasing, expensive and inefficient paper storage solution in which hundreds of file boxes were being used to store documents ranging from RFP's to cost worksheets to construction drawings and photos. Financial documents, such as contractor invoices, government planning applications, regulations documentation and correspondence have now been organized in a simple to manage and easy to use application. This has also provided ADC with invaluable 24 hour internet access to their documents from their global offices based in Toronto, Quito, Budapest and London.

When asked how the solution has benefitted them so far, Andrea had this to say; "We no longer have to spend time searching for documents as they are all located in one central database. Also, since FileDirector allows us to access files easily, we are now able to retrieve the documents from past projects that facilitate us in creating documents that relate to new projects, thus saving us valuable research time. The solution has saved us an incredible amount of money. When initially researching various alternatives for data management, FileDirector not only provided us with an excellent solution covering all of our needs but it also did so in a cost effective manner. Most of the other options were twice or three times the price and were far too complicated for our needs. We needed to keep it simple, and FileDirector provided a platform to do so."

With the FileDirector Document Management Solution, now in place for over a year at ADC, they have seen costs fall, efficiency increase and their jobs simply made easier. Andrea stated "We could not be more pleased with this choice. The software fulfills all of our criteria and I believe the support is truly unmatched in the industry."

## Client Success Story

**Company:** Airport Development Corp.

**Industry:** Construction

### The Challenges

- Real-time, world-wide, access and collaboration
- Ensure accurate version control
- Improve RFP response times

### The Results

- Documents are available world-wide through the FileDirector Web Interface
- Documents are stored and shared in a single repository ensuring users are working with the latest information
- Documentation for similar past projects can be quickly accessed to aid in RFP responses

*"We are now able to retrieve the documents from past projects that facilitate us in creating documents that relate to new projects, thus saving us valuable research time. The solution has saved us an incredible amount of money."*

Andrea Danckzay-Blum, Administration Manager
